- Enhancement of the logic for the creation of shipment documents
- Delivery receipt / return receipt: adjustment of the format based on the new print template

Labels

- Adjustment of the line distance for recipient address

Polling

- Enhancement of the logic for the creation of shipment documents

Webservice

- Enhancement of the logic for the creation of shipment documents

PLC Version 8.2.1 valid as of May 6th 2018

PLC user interface

- GDPR
 - Conclusion of an order processing contract

With the new release of PLC 8.2.1 there will be a possibility to accept the processing agreement within the Post-Labelcenter. Therefor you have to log in onto PLC and accept the agreement in order to be able to use the Post-Labelcenter. We would like to point out that without the conclusion of an order processing contract until May 25th 2018 the service (GUI, webservice and windows service) can no longer be made available.
 - Deleting personal data

After PLC 8.2.1 it will be possible to delete address data within the Post-Labelcenter. For it you can either use the new added menu item GDPR-Information or directly use the menu item Organizations for deleting. Both can be found in the menu Administration.
- Bugfixes
 - PDF download in Firefox corrected
 - Occasionally missing display of additional services of saved/already printed shipments in the editor corrected

PLC Version 8.2 valid as of April 8th 2018

PLC user interface

- Daily closing: debtor ID is also printed on the top right
- Additions carrier/shipment number-mapping
- Adjustment printer configuration for printing eRs labels (pdf-print)
- Enhancement of the function "set shipment status" cancelled
- In case no shipping date is set when the shipment was created, today's date is set automatically. If the shipment was created today but printed tomorrow/on a later date, the print date is set.
- Improvement of the menu "Articles"
- Adjustment of the Customs Declaration CN23: phone number and e-mail-address are printed in separated fields

PLC Version 8.1 valid as of January 21st 2018

PLC user interface

- The field "postal code" is an optional field if the country has no postal code
- Daily closing: customer ID is printed on the top right
- The filter "current status" has four relevant criteria
- Additional fields in the filter: Shipper Reference 1, Shipper Reference 2, Recipient Name 2
- When creating a new user, a role must be added
- Creation of a new shipment: shipper and recipient address can be quickly changed by an arrow symbol between the fields

Labels

- Adjustment of the font size for the shipper address
- Shipments with the feature codes preferred postal branch and/or preferred pick up station: field "recipient name 2" will be printed on the label

Polling

- The field "postal code" is an optional field if the country has no postal code

Webservice

- The field "postal code" is an optional field if the country has no postal code

PLC Version 7.3 valid as of October 24th 2017

PLC user interface

- Adjustments and enhancements for the menu "Accounts": new import/export function and updates for the creation and editing of accounts
- Several improvements

Labels

- Shipper address will be printed centered
- AdressLine2 will be printed on the label (import via Polling or Webservice)

Webservice

- New methods: PerformEndOfDaySelect, GetProductsAndFeatureForCountry
- Addition of a new parameter for ImportShipment methods
- Extension of the error codes

PLC Version 7.2 valid as of July 17th 2017

- New column „Track & Trace“ in the shipment list display
- New password policies: min. length 8 characters, upper and lowercase letters as well as special characters and digits
- New feature „Lost password“ on the login page (link expires after 24 hours)
- Accounts will be blocked after repeated entry of the wrong password. Either another user with admin rights can unblock the account or happens automatically after 15 minutes
- When using polling or webservice: the [branch key](#) must be added when using preferred postal branch or preferred pick up station
- Implementation of a fall back mechanism in case of an outage by one of our partners
- Coast center only within a site/client possible
- Automatic check of the postal code format when creating international address in PLC
- Several changes of the label layout

PLC Version 7.1 valid as of April 10th 2017

- When searching for a recipient within the shipment creation and the fields Name2, Name3 and/or Name4 are filled, they are displayed as mouse over when the mouse is moved over the recipient.
- Within the user dataset, you can subscribe to a newsletter for the following topics:
 - General information about PLC
 - Polling / Webservice changes
 - Maintenance / outages
- Hermes ParcelShops can be selected as preferred postal branch for a recipient.
- You can choose if a detailed and/or summarized daily closing should be printed and the number of copies.
- If the address field Province is filled, it will be printed on the label for international shipments.
- While adding a German address, the city will be filled automatically when entering a zip code.
- The total number of shipments is displayed in the shipments list of the shipping manager.
- When using polling and a shipment is imported with a faulty carrier („Fehlerfrächter“), the shipment can be edited in PLC without cancelling it. For that open the shipment and click „Actions“ - > „Recreate shipment“. The shipment is opened in a new window, can be edited and the label can be printed with “Print labels and save”.
- When searching in the organizations management, the field Name2 is included in the search.
- Mandatory fields are highlighted bold in the address import template.
- When using polling or webservice, the 17-digit branch key must be added when using preferred postal branch or preferred pick up station. A list of all branch keys can be found [here](#). Please do not open the .csv file with Excel because the last digit of the branch key will be cut.
