

OUR ENVIRONMENTAL POLICY

We don't just talk. We take action. For this reason, we have set out these principles on dealing with our environment:

Climate and environmental protection – We take care

We work in a resource-friendly manner to the **greatest possible extent**. This means with the lowest possible level of emissions, waste and consumption of water and energy. In this way we minimise our environmental impacts. **We optimally leverage our potential and experience** and also cooperate above and beyond individual departments and business areas to facilitate climate and environmental protection.

Risk management – We are vigilant

We operate an internal risk management system based on identifying and considering potential risks and their possible implications. **We implement preventive measures to prevent accidents and malfunctions**. We pay attention to securely handling hazardous substances and regularly service our facilities as well as the vehicle fleet. In this way we reduce safety risks.

Environmental education – We inform

We promote the **environmentally responsible behaviour of our employees** on the basis of targeted trainings, information and motivation. Successful environmental protection in-house is only possible if everyone does his share. **We raise awareness of the issue of climate and environmental protection among employees, customers and suppliers**.

Acting as a role model – We lead by example

We want to further strengthen the pioneering role of Austrian Post in the field of green logistics through our Environmental Policy.

Legal Compliance – We live it

We are committed to abiding by all relevant **legal requirements** and monitor compliance with them.

Continuous improvement process – We keep at it

We want to continually improve our **environmental scorecard**. This is why we define environmental targets, regularly review them and carry out improvement measures if necessary.
